Abstract (en)

[origin: EP2442027A2] The device (1) has an exhaust gas blower (22) for collecting and discharging exhaust gas present in an exhaust chamber (9) to an exhaust gas removal unit (6). The blower sucks the exhaust gas using the chamber via a first opening (25) and discharges the gas in the removal unit via second opening (26). The openings are arranged in a housing (24). The housing is provided with a third opening (21) for recirculation of an exhaust gas partial stream (62) from the blower into a supply unit (5) for combustion air (51), where the blower is provided in the housing. An independent claim is also included for a method for operating a heating device for combustion of combustion gas-air-mixture.
