Abstract (en)
[origin: EP2442065A2] The switchable operating head has a cover (HU) that forms a splinter (T), in which a tubular holder (PH) is arranged with multiple pellets (P) that are arranged in a distributing manner. Three ignition devices are arranged over the circumference in the area of the holder in a distributing manner. The ignition devices are controlled or initiated adjacent to each other in a simultaneous manner. An independent claim is also included for a triggering method for a switchable operating load for a warhead.
