Abstract (en)
[origin: WO2010145944A2] The invention relates to a high-pressure cleaning device having a motor pump unit for pressurizing a cleaning fluid to which a liquid cleaning agent can be mixed and having a cleaning agent tank implementing a reservoir for liquid cleaning agent and comprising a tank opening that can be sealed closed by a cover, wherein the cleaning agent tank is releasably mounted on the motor pump unit and the motor pump unit comprises a removal device for removing cleaning agent from the cleaning agent tank. In order to further develop the high-pressure cleaning device such that the replacement of the cleaning agent tank can be simplified, the invention proposes that the removal device comprises a tank receptacle in which at least one tank segment connected to the tank opening of the cleaning agent tank having a closed tank opening aligned vertically downward can be inserted, and that a mandrel protrudes into the tank receptacle and enclosed a removal channel, wherein the cover comprises a membrane that can be penetrated by the mandrel.
