Abstract (en)

[origin: WO2010146268A1] The invention relates to an aerothermodynamic module (1) for a light utility passenger vehicle, comprising, as equipment for cooling the engine of a vehicle, a radiator (2) and a motor-driven fan (3) assembled together, characterized in that one of said pieces of cooling equipment (2, 3) comprises attachment means for pivotably mounting said equipment (2, 3), and thus the module (1) on the structure of the vehicle, between a normal operational position in which it extends above the power train (8) of the vehicle in the space between the fictive so-called "technical cowl" surface (9) and the surface (11) of the power train (8) increased by the offset thereof, and a raised so-called "after-sale" position.
