Abstract (en)

[origin: US2010313525A1] A packaging material dispenser may include a roll carriage having an upper portion and a lower portion, and a base plate separating the upper portion from the lower portion. The packaging material dispenser may also include a packaging material dispensing assembly mounted on an upper surface of the base plate and defining at least a portion of a packaging material path. A first portion of the packaging material path may extend behind the packaging material dispensing assembly. The upper portion of the roll carriage may include an opening defining a packaging material path access area positioned to provide access to a top of the packaging material path. The packaging material dispenser may also include a packaging material dispensing assembly drive mechanism extending below the base plate.
