Abstract (en)  
[origin: WO2010147550A1] A sight mount for firearms, comprising an elongate base module (101;201) adapted to be mounted on a firearm and an elongate trajectory module (104;204) in the form a frame pivotally connected to the base module (101;201). The trajectory module (104;204) is adapted to support at least one sight and to be pivoted between different biased positions upwards and downwards relative to the base module (101;201), corresponding to different shooting distances, wherein the trajectory module (104) is adapted to be releasably mounted on either side of the base module (101).
