Abstract (en)
[origin: WO2010146070A1] The invention relates to a folding display device comprising several panels that are arranged parallel to each other and are connected to each other so as to be movable among each other. In order to create a display device that can remain at a location, it is provided that the display device not only can be folded but also is provided with a receiving device, which can receive the display device when it is folded together.
