Abstract (en)

[origin: WO2010145893A2] In at least one embodiment of the optoelectronic semiconductor component (1), the latter has a housing base (2) and at least one semiconductor chip (3), which is attached to the housing base (2). In operation, the optoelectronic semiconductor chip (3) emits primary radiation, the primary radiation having a proportion of ultraviolet radiation. Furthermore, the semiconductor component (1) comprises a filter means (4), which is equipped to absorb the ultraviolet proportion of the primary radiation, wherein the filter means (4) is at least partly located between the semiconductor chip (3) and the housing base (2) and/or between the semiconductor chip (3) and an optical component (7). The proportion of ultraviolet radiation, in reference to a total optical output of the primary radiation, is between 0.1% and 4.0% inclusive.
