Abstract (en)
[origin: EP2443956A2] The system (10) has a tubular inner sleeve (14), slide element (22) and membrane (20) that is clamped between retracted and clamped arrangements. The slide element moves along the tubular inner sleeve, and clamping elements i.e. traction ropes (24), clamp the membrane, where the clamping elements are articulated at the slide element and formed by an elastic bending rod (21). An intermediate chamber (18) is formed between the tubular inner sleeve and a tubular outer sleeve (16), and the membrane is arranged in the intermediate chamber in a retracted condition.
