Abstract (en)
[origin: EP2444347A2] The cross-wound bobbin has a thread passageway which encloses thread guidance channel (6) with receptacle housings (18,21) and/or receiving portions (31-33) for various thread monitoring and treatment facilities. The thread guidance channel is extended between unwinding coil positioned template (2) and the winding device (4). The negative pressure flow is present in the thread guidance channel, when negative pressure is acted in the necessary sections such that the flow direction is more predeterminable.
