Abstract (en)

[origin: EP2444358A1] The present invention refers to the field of lifts for servicing small vehicles, such as for example motorbikes and particularly quads. The lift (1) comprises at least two structures (2, 2') each comprising: a flat element (9), on which a vehicle can be positioned, supported by a lifting unit (3) located below the flat element (9); a frame (6) located below the lifting unit (3), acting as a base for the structure (2, 2'); said frame (6) and said flat element (9) can be parallelly located one to the other with respect to the centerline of the flat element (9). Said structures (2, 2') are characterized by the fact that they can be reciprocally moved close or away by sliding means (11) integral with the frame (6) of each structure (2, 2') and engaging corresponding guiding tracks (16).
