Abstract (en)

[origin: EP2444359A1] The lorry (1) has a counter weight (4) arranged at a rear sided end of a vehicle body (2). An incineration-motor drive system is arranged within the vehicle body in an aggregate space. The drive system comprises a combustion engine and a gear box propelled by the combustion engine. A liquid radiator device is provided for cooling the drive system. The liquid radiator device is partially arranged above the combustion engine and between a driver operating place (7) and the counter weight in a vehicle longitudinal direction. The liquid radiator device is designed as a fluid-air-heat exchanger.
