Abstract (en)

[origin: EP2444367A1] The device has a mounting plate (19) positioned under a lower face of frame (12), and an electric drive motor (9) fixed below the frame. The plate is equipped with articulation lug (22) at side end, where the lug projects on sides of the frame to engage through openings forming a bearing (21) of articulation tab of a holding plate (18) and articulation element formed of hinge plate and shoulder to pivot the plate. The mounting plate is mounted elastically on the holding plate at another side end so as to stress the motor toward base and maintain a transmission belt (11) in tension.
