Abstract (en)  
[origin: EP2444562A2] The safety enclosure (1) has an elastic sealing element (4) that is arranged between several modules (2,3). The modules are pressed with respect to each other by a connecting unit. A receptacle (5) is provided in a module (2) for holding the module (3) by tie bolts (6) that is tensioned within the receptacle. The pressed modules are fixed in a preset position by using a clamping unit. The receptacle is used as a receiving socket with a groove having cylindrical surface that is equipped with a widened end piece.
