Abstract (en)

[origin: EP2444563A1] The wall element (10) has base elements (11.1, 11.2) with lateral plates (12.1, 12.2) provided with outer surfaces (13.1, 13.2) and inner surfaces (14.1, 14.2). Transverse bars (15.1, 15.2) are arranged in a region of the inner surfaces to extend perpendicular to surfaces of the lateral plates. The base elements are arranged such that one surface of one lateral plate stays parallel to the other surface of the other lateral plate and one bar is aligned with the other bar in a preassembled state. A connecting element (20) e.g. clip, connects the base elements temporarily with each other. The wall element is made of stone, concrete, plastic-concrete and plastic. Independent claims are also included for the following: (1) an intermediate product for manufacturing a wall element (2) a method for constructing a wall.
