Abstract (en)

Device for manipulation of a spa cover comprising a thermo-insulating cover (2) suitable to cover a spa vessel between a covering position and an opened position, said cover comprising at least one pair of thermo-insulating segments, each formed of a carrier segment (21) and a carried segment (22), being connected together in a hinged manner, the carrier segment (21) being rotatable mounted to the spa and coupled with a rotating drive (4), wherein in between the carrier segment (21) and the carried segment (22) is mounted a first controlled drawbar (36), its ends being rotatable and slidably mounted to their corresponding cover segments, the end of the first drawbar (36) on the carrier segment (21) being rotatable connected with a first end of a second control drawbar (35), the second end of said second control drawbar being rotatable connected with an auxiliary arm (32) rotatable mounted with respect to the spa.
