Abstract (en)

[origin: EP2444586A1] The system has a ladder (4) including attachment pins (7) along length, where the pins are inserted and attached in orifices (3) of a vertical hollow upright (2) of a housing and storage module. The ladder has a vertical median rail (5), and horizontal bars (6) are fixed on the rail at regular intervals. Pins of the ladder are fixed on the rail. Fixation of the pins on the rail is adjustable in height along the rail by sliding the pins along the rail before fixation of the pins at a desired location. The pins include a sliding member i.e. stop interface, on a ladder side.
