Abstract (en)
[origin: EP2444860A1] The mechanism (2) has a pallet that is constituted of operational elements (41, 42), where the operational elements include a first functional part (410) that is cooperated with a balance. The functional part is tiltingly mounted on an axis (411). The operational elements comprise second and third functional parts (430, 440), respectively, and articulated connection (6) ensures transmission of tilting movement from one of the operational elements to the other operational element and vice versa.
