Abstract (en)

[origin: EP2444987A1] The device has positioning units for positioning an actuator (1) on a plate-support (2), and a pull rod (12) movable with respect to the plate-support, where the pull rod is slidingly mounted with respect to the plate-support. A gripping unit (15) allows displacement of the pull rod between an unlocked position in which the actuator is displaced and a locked position in which the pull rod blocks displacement of the actuator so as to ensure its fixing on the plate-support.
