Abstract (en)

[origin: WO2010149573A1] The invention relates to a fixture component (20) for a tank (15), wherein the fixture component (20) at least partially has an electrically conductive material which forms a first electrode (6), and a second electrode (7) which is electrically isolated with respect to the first electrode (6). Here, at least one electrode is applied to the fixture component, in particular by means of the pad printing process, airbrush printing process or screen printing process.
