Abstract (en)
[origin: WO2010149494A1] A flow restrictor (2) has a line piece (4) with an air inlet (6) and with an air outlet (8), and has at least one resistance element (10, 32, 36). The resistance element (10, 32, 36) is positioned within the line piece (4) and imparts a predetermined flow resistance to an air flow passing from the air inlet (6) to the air outlet (8). The resistance element (10, 32, 36) preferably extends at least partially in an axial direction of the line piece (4). Such a flow restrictor (2) serves to adjust an air volume flow and exhibits a particularly low level of inherent noise generation.
