Abstract (en)
[origin: CA2764515A1] Provided is an active body (1) with flares (2, 6, 7) arranged adjacent, above, or behind each other, it is proposed to integrate at least one hydrophobic separating layer (3, 5) between the flares, or flare disks (2, 6, 7), thereby preventing the flares (2, 6, 7) from attaching or sticking. In one variant, the hydrophobic separating layer (3) is applied to at least one side of the flares (2) preferably as a powder preferably consisting of microspheres, or the like. In a further variant, a separating disk is disposed between the flares (6, 7) as the separating layer (5), which in addition is anti-cohesive and anti-adhesive.
