Abstract (en)

[origin: WO2010149140A1] The invention relates to a holder for a movable sensor (1), which can be directed towards a sensor target (T), on a supporting structure (2), which holder contains at least two sensor-side bearings (22, 24; 26) at a distance to each other, at least two supporting-structure-side bearings (32, 34; 36) at a distance to each other, at least two length-adjustable actuating drive units (4, 5; 6), wherein each of the actuating drive units (4, 5; 6) is provided between an associated sensor-side bearing (22, 24; 26) and an associated supporting-structure-side bearing (32, 34; 36), and a center bearing (7; 8), which is designed in such a way that the center bearing supports the sensor (1) on the supporting structure (2) so that the sensor can be swiveled about a kinematic swivel center point about at least two spatial axes (X, Y; Z).
