Abstract (en)
[origin: WO2010149282A1] The invention relates to a plug connector having a main part, comprising a contact blade basket having at least one first and one second contact zone. Said contact zones are disposed one after the other in the longitudinal direction of the plug connector, and have a plurality of contact blades. Adjacent contact blades are separated from each other by a gap. An intermediate wall is provided between the contact zones disposed one after the other, forming a conductive contact both between the contact blades of the first contact zone and the contact blades of the second contact, and between the individual contact blades of the first contact zone and the individual contact blades of the second contact zone.
