Abstract (en)

An infant bodysuit having a pair of rows of snap sockets either one of which can receive a curved row of snaps studs, the rows of snap sockets and snap studs being provided along a gentle curve that is easy for a caregiver to match up the studs and sockets. Reinforcement, through a woven fabric facing, is provided in the region of the snap sockets on the front panel to provide two-dimensional stability throughout the region. Rib binding is used along the leg openings and covers the facing material for improved comfort to the infant. A flat, straight edge bottom is provided along the bottom edge of the front panel to reduce bulkiness. An improved leg opening is achieved by significantly narrowing the width of the front panel from the top of the leg opening down to the attachment portion.
