Abstract (en)

[origin: EP2446798A2] The dishwasher has a rinsing container receiving items to be washed. Piping strips partially cover a gap that is produced between the container and surfaces (35, 36) of a respective inner door and a table plate outside a water guiding region (37) of the container. The strips include a piping element with an I-shaped cross-sectional fastening section (25). The fastening section extends parallel to the surfaces in a longitudinal direction and fixed in a U-shaped cross-sectional fastening section (29) that is designed at a horizontal section (17) and vertical sections of a reinforcement element.
