Abstract (en)

[origin: EP2447441A2] The device has hook elements (24,26) that are hooked into each other by movement of lining element profile (18) with respect to base profile (16) in a direction parallel to plane of front lining element (12). The hook elements are entangled with each other, when distance between base profile and lining element profile in region of hook element is smaller than maximum spacing. The base profile and lining element profile provided in region of hook element are pressed by spring element (22) to move closer to each other with maximum of predetermined space.
