Abstract (en)

[origin: EP2447611A2] The method involves capturing cooking set-points e.g. temperature, for defining an associated and determined cooking mode and placing a food product (2) in an oven. Cooking operation is initiated (3), and the operation of the elements is monitored (4). Operation of the mode associated with the oven is automatically switched (6) to a degraded cooking mode when one of the elements is defective, where degraded cooking mode has one of associated set-points of the elements differs from the captured set-point.
