Abstract (en)

[origin: EP2447626A2] The exchanger has base profiles (10, 10') i.e. multi-chamber hollow profiles, connected with an inlet device (21) and an outlet device (22). The base profiles comprises a profile section (13) for passage of refrigerant agent e.g. butane, in a main flow direction (60), and another profile section (14) for passage of the agent opposite to the direction. The profiles comprise a unit for increasing heat exchange with air that surrounds the profiles, or fluid that flows in transverse stream at the profiles. The unit co-acts transverse to the direction by deformation of the profile sections.
