Abstract (en)

[origin: WO2011000467A1] The invention relates to a duct wall (120) of a rod-conveying device (10), particularly comprising two or more strands, of a machine of the tobacco processing industry (P), with an upper side, an underside, an outer side and an inner side, facing a rod-conveying duct (12). The duct wall (120) is improved by having an opening (59) for receiving a nozzle body (33) of a nozzle device (30), wherein the opening (59) is formed obliquely in the duct wall (120) in such a way that the inlet opening of the opening (59) for the nozzle body (33) in the outer side is formed offset transversely with respect to the outlet opening of the opening (59) for the nozzle body (33) in the inner side, facing the rod-conveying duct (12), in the longitudinal direction of the duct wall (120) and/or upstream in the rod-conveying direction. The invention also relates to a device (10) for conveying at least one rod of material of the tobacco processing industry, wherein a rod-conveying duct (12) is provided for the rod of material which is to be formed or has been formed, wherein the rod-conveying duct (12) has two duct walls (120, 121) arranged at a certain distance from each other, and also relates to a machine (P) of the tobacco processing industry, in particular a rod-forming machine of the tobacco processing industry, preferably a cigarette rod-forming machine.
