Abstract (en)
[origin: WO2011002322A1] The current invention is in respect of a rotational sanitary unit constituted by a structure that essentially holds a washbasin and a sanitary vase, characterized by the location of the referred washbasin on one side and the referred sanitary vase on the opposite side, presenting the user, according to the side and angle with the most convenient access in order to satisfy ones physiological, hygienic and cosmetic needs, having as a principal that the first never occurs simultaneously with the last two and vice-versa, and because it is preferentially inserted in a circled arch recess of a wall of a sanitary installation, this recess presents a diameter correspondent to the diameter of the referred structure of which it rotates around a central vertical axis in order to present the user with either the washbasin or the sanitary vase, the movement been a revolving to-and-fro of the structure, either manually or with the aid of motorized means and processing itself in an angle not superior to 360°, preferentially from 0° to 180° or in particular cases from 0° to 210°.
