Abstract (en)

[origin: WO2011000363A1] The invention relates to a motor vehicle lock which is composed of mechanical blocking and/or locking elements and electrical, electromotive and/or electronic components interacting therewith and arranged on at least one housing part (10) of the motor vehicle lock. According to the invention, an electrical line fixed to the housing part (10) leads to at least one of the electrical, electromotive and/or electronic components, wherein said electrical line consists of a bendable, single- or multi-core cable (8), the cable path (19a, 19b) of which extends in a cable channel (15) configured in the housing part (10), said cable channel (15) consisting on at least one side of the cable path (19a, 19b) of a permanently plastically deformed material that fixes the cable (8) in the cable channel (15) due to its deformation (V).
