Abstract (en)

[origin: GB2460964A] A telecommunications system 1 comprises an electronic call centre 9 and a recipient telecommunications device 25 operative to receive a voice/data transmission over a telecommunications network 7. The recipient telecommunications device 25 is provided with routing means operative to route the voice/data transmission via the electronic call centre 9, wherein a copy of the voice/data transmission is stored. The system is operative to verify that the voice/data transmission has been routed via the electronic call centre 9 and such verification may involve modification of the caller line identity (CLI). The system may be used to record telephone conversations and SMS or MMS messages.
