Abstract (en)

[origin: EP2449920A1] The device has a movable part opposite to a fixed element of a carrier structure carrying a folding table. A housing (16) is arranged in the fixed element. A bolt (13) is mounted on the movable part of a folding table panel for transversely sliding on a part between a projecting position to be received in the housing and a retracted position to leave the housing. The device is arranged such that an unlocking component (17) and the bolt cooperate by friction, and are mutually maintained in an active position and in the retracted position, respectively. Independent claims are also included for the following: (1) a side of a carrier structure carrying a folding table, comprising a movable panel (2) a table tennis table including a carrying structure.
