Abstract (en)

[origin: EP2450166A1] The method involves moving a clipboard (15) with a feed speed away from a cutting device. An incomplete portion is transferred from the clipboard into a conveyer device (14). The incomplete portion is completed by cutting and adding slices after the incomplete portion is taken over by the conveyor device and subsequently transferred. A distance between an upper side of the last cut and filled slices and a lower side of a cutter with each slice is successively reduced after transfer of the incomplete portion on the conveyor device.
