Abstract (en)

[origin: EP2450242A1] The identifier has an arrangement formed of rectangular reception cavity (20) and flap for reception of removable data medium, where the flap closes the cavity. The flap and cavity are provided with a pair of slides (24) and a pair of pins being engaged in the slides such that the flap moves by rotating around an axis materialized by the pins and by sliding the pins in the slides. The flap has additional pins in which the slides are engaged. The slides have a pair of elbows at an end for receiving the pair of additional pins in a position in which the flap closes the cavity. The removable data medium includes universal serial bus (USB)connector.
