Abstract (en)
[origin: EP2450510A2] The invention relates to a door actuation and/or locking device (1,11) for household appliances, wherein a hook (5,50) movable into at least one condition of engagement with the door is locked into said condition by a cursor (60) associated with bistable latching means. In particular, the cursor (60) has a body (62) with a central seat (67) that houses rotation and/or engagement guides (68,69); the bistable latching means (65) comprise a rotatable pin (66) that cooperates with said guides (68, 69) to ensure that the cursor takes distinct positions of stable equilibrium (60). The invention also comprises a bistable mechanism, in particular associated with the door locking device and/or to actuation means.
