Abstract (en)

The present invention is a door and window system wherein inner and outer aluminum profiles (1,2,3,4,5,6,7,8) which are mechanically assembled to thermal insulation barrier (21) with special geometric cross-section produced from a polymeric material, and sealing gaskets (18) with special geometric cross-section which are assembled onto these profiles by being adhered onto them and/or produced on them directly, which are made of a material such as epdm, tpe, and glazing bead profile (15,16) are used as an outer profile differently from standard profiles, thus they are concealed. When the glazing bead profiles (15,16), which are perceived as an outer profiles when viewed from the outside, not as a glazing bead; they consist of narrower frames up to the glazing bead width in comparison with traditional systems and thus more daylight entrance and visual contact can be provided with outdoor.
