Abstract (en)

[origin: EP2450925A2] The remote control has a radio transmitter module (1) from which an actuation rod (11) protrudes, and a multi-part housing (2) accommodating the transmitter module. Upper and lower housing parts (21, 22) of the housing are movable relative to each other for activating the actuation rod and have large surfaces in plate-shape. The upper housing part is formed in trough-shape, and has side walls (W21) partially aligned perpendicular to the associated large surface. The large areas of both the housing parts are expandable apart by a spring (3).
