Abstract (en)
[origin: WO2011003502A1] An adhesive fastening part, with a flat carrier part (14) made from warp (10) and weft threads (12) and with closure elements (18) which project from the carrier part (14) and are formed from loop piles (16) which are anchored on the carrier part (14), is characterized in that, for the free adaptation of the reflection properties of the adhesive fastening part to the corresponding reflection properties of a functional structure, in particular a clothing fabric, which carries the adhesive fastening part, at least parts of the fastening part, preferably weft threads (12), are formed from a thread material which has a preselected reflectivity with respect to infrared radiation.
