Abstract (en)
[origin: WO2011010974A1] This invention is the Antirotator Dynamic Hip Screw and Plate which provides fusion by fixing bones in case of single or multiple fractures of the neck parts of the femoral bones, pertrochanteric, intertrochanteric and subtrochanteric fractures; and its feature is being consisted of that The antirotator hip screw (1), The threads for spongiosis (2), The cannulated hole all through the hip screw (3), The slide socket of the antirotator blade on the antirotator hip screw (4), The antirotator blade (5), The sharp end of the antirotator blade (6), The threaded socket of the inserter of the antirotator blade (7), The slide socket of the antirotator blade (8), The hole of the antirotator hip screw on antirotator dynamic hip plate (9), The slide socket of the antirotator blade on the antirotator dynamic hip plate (10), The antirotator dynamic hip plate (11), The cannulated compression screw (12).
