Abstract (en)

[origin: WO2010049011A2] The invention relates to topical cosmetic or dermatological compositions for the treatment of mature or intrinsically or extrinsically aged skin, in particular for anti-wrinkle treatment. Said compositions contain a combination of at least one soy protein hydrolysate with an average molecular weight ranging between 600 and 1,000 dalton, preferably 800 dalton, at least one hydrophilic extract of abelmusk seed, at least one active ingredient selected from hyaluronic acid, silanol ethers, silanol esters and hyaluronic acid salts, and at least one dipeptide, tripeptide, tetrapeptide, pentapeptide or hexapeptide, that can be N-acylated and/or esterified and/or be present as a physiologically acceptable salt and that can stimulate the release of growth factors such as TGF- $\beta$  and subsequently stimulate collagen and/or fibronectin synthesis in the skin.
