Abstract (en)
[origin: WO2011085722A2] The invention relates to a retainer for an inflated balloon, comprising a foot supported on a surface, through which foot at least one slit extends, for fastening a neck of the balloon. The balloon is composed of a tubular material of a shell that forms the balloon. The slit opens into at least one recess provided in the surface of the foot, the recess being designed as a guide for a part that bounds the inflated balloon at the bottom, into which part the neck fastened in the slit opens.
