Abstract (en)  
[origin: WO2011003646A1] The invention is based on a hammer-drilling and/or cutting device having an impact mechanism (24) and an intermediate shaft (36; 60; 84; 106), which are in each case mounted substantially parallel to an axial direction, and having a gearbox housing (10) and an intermediate flange (20; 80; 102; 116). The invention proposes that the hammer-drilling and/or cutting device comprise a bearing shield (38; 58; 82; 104) which is detachably connected to the intermediate flange (20; 80; 102; 116) and is provided to support the intermediate shaft (36; 60; 84; 106) and at least one component of the impact mechanism (24).
