Abstract (en)
[origin: WO2011003790A1] The invention relates to a contacting device for electrically contacting tie beams of a suspension in an elevator system, the contacting device comprising: a housing (3, 4) having a recess in which the suspension (1) can be received so that the housing (3, 4) substantially encloses the suspension (1); at least one contact element (6) disposed in the recess of the housing (3, 4); at least one lift element (7) supported by the housing (3, 4); wherein the at least one lift element (7) can be guided through the suspension such that at least one tie beam (11) can be lifted out of an enclosure (12) of the suspension (1) and thereby can be brought into electrical contact with the contact element (6).
