Abstract (en)

[origin: WO2011003427A1] The invention relates to a tamping pick (5), comprising a shaft expansion (10) at a lower end (9) of a pick shaft (6). Said shaft expansion is equipped with an outer diameter that is greater than the diameter of the pick shaft (6) and a stop surface (12) that is provided for resting on the tamping lever (4) of your tamping unit and that extends perpendicular to the longitudinal axis (11). Thus, any bending forces acting on the tamping pick (5) are transmitted to the tamping lever (4).
