Abstract (en)

[origin: WO2011005228A1] Valves (1) for steam engine with rotating piston and drive thereof, the cylinder rotary body (3) with the cavity (31) is placed in the casing whereof (2). The rotary body (3) contains at least one body opening (32) along the circumference thereof and the casing (2) contains at least one pipe opening (24) and at least one engine opening (25) for ensuring pass-over of propulsion medium between the pipe (6) and the engine. The valve wheel (8) connected to the drive gear (9) designated for driving the valve (1) is mounted on the back shaft (4). The drive gear (9) consists of at least one circulating drive element (93) connected to the drive wheel (91), the valve wheels (8), at least one tensioner (95) and at least one vibration damper (94).
