Abstract (en)

[origin: WO2011003802A1] The invention relates to a torsional vibration damper arrangement, in particular in a clutch disc, comprising an input region (14) and an output region (20) rotatable relative to an input region (14) about a rotational axis (A) against the action of a damping spring arrangement (44), further comprising a friction arrangement (60) having at least one frictional characteristic depending on a speed in a speed range and acting against a relative rotation between the input region (14) and the output region (20).
