Abstract (en)  
A machine for wrapping with a film (50) a group of products (100) arranged inside a containing casing (200) open above and below, comprises carriage means (3) slidably supported by frame means (2) along a movement direction (A) and rotatably supporting ring means (4) rotating around a wrapping axis (Z), in particular parallel to the movement direction (A), and supporting a reel of film (50) and an unwinding unit (5) of the film (50); the machine (1) further comprises a movement unit (10) slidably connected to the carriage means (3) and movable along the movement direction (A) at least for hooking, lifting and progressively disengaging the containing casing (200) from the group of products (100), in a wrapping step, such as to enable the film (50) unwound from the unwinding unit (5) to wrap portions of the group of products (100) left uncovered by the containing casing (200).
