Abstract (en)

Combined clothes washing and drying machine comprising a tub (2) provided with a substantially cylindrical wall, a rotating drum (1) mounted rotatably within said tub and provided with a number of perforations (6) in the cylindrical side surface thereof, a conduit (3) for exhausting or circulating the drying air as provided with a suction mouth (4) for taking in the air from the interior of said tub, said suction mouth (4) being situated on a portion of said substantially cylindrical wall, wherein during at least a definite interval (I) of the drying phase, said drum (1) is driven to rotate at a ventilation speed (V) that is sufficient to cause the washload to distribute into a cylindrical geometrical contour by spreading it out along the cylindrical wall of the drum (1) in contact
